

Power Capabilities Across The Data Supply Chain

The World's Most Advanced Suite of Customer Data Orchestration Products

Manage Customer Data Across The Entire Data Supply Chain

Most companies have a data supply chain but have little visibility into how it works, resulting in massive customer data challenges. The data supply chain consists of five stages; data collection, standardization, transformation and enrichment, integration, and then activation through the delivery of data to execution systems based on business rules.

Data Collection

The way you collect data impacts how you can use it. Tealium universally collects customer data from any source including; websites, mobile applications, IoT devices, kiosks, servers, files, and more.

Example Use Cases - Vendor Instrumentation, Vendor Deployment, Tag Management, File Import

Data Standardization

Tools built right into the workflow solve the challenge of dirty data as it's collected.

Example Use Cases - Data Organization, Data Quality, Data Layer Management

Data Transformation and Enrichment

Build insights and value directly into a portable and customer-centric data asset that can flow across your tech stack and organization.

Example Use Cases - Data Combination, Customer Profiles, Visitor Stitching, Identity Resolution

Data Integration

Tealium has the largest integration ecosystem on the market with over 1,000 turnkey client-side and server-side integrations in addition to flexible APIs, libraries, and connections in custom developer languages.

Example Use Cases - Data Syndication, Business Rules, Connector Actions

Data Activation

Tealium sends actions (e.g. add or remove from display campaign, send email, update data in a table, etc.) via API connectors, to third-party marketing technology services.

Example Use Cases - Data Accessibility, Machine Learning Readiness, Data Warehouses and Lakes

Overarching Data Governance: Security, Privacy, and Compliance

Tealium gives you the tools, infrastructure, and practices to be confident your data is protected by the most stringent requirements, and the rapidly evolving data security, privacy, and regulatory compliance landscape.

The Customer Data Hub Encompasses Four Products That Power The Data Supply Chain

The Customer Data Hub encompasses Tealium iQ Tag Management and Tealium EventStream, providing client-side and server-side event data collection and delivery capabilities. Tealium's customer data platform, AudienceStream, transforms and enriches raw, event-level building block data into visitor profiles and enables business rules to trigger from these profiles. Tealium DataAccess gives customers accessibility to a central repository of customer data.

Collect, control, and deliver your event data from the client-side. Ideal for managing data from traditional tag based vendors.

V.

Standardization Data Integration

Collect, control, and deliver your event data from the server-side. Lightweight solution ideal for mobile, IoT, and desktop when efficiency or security is critical.

Data Collection Data Standardization

Data Integration

Create a unified view of your customer. Turn event-level data into visitor/audience insights and segment once across your tech stack.

Data Transformation and Enrichment

Data Integration

Visibility and ownership of a clean, correlated set of your customer data, optimized for delivery to your systems.

Data Activation

Data Integration

Tealium Is The Only Customer Data Solution That:

- Is Vendor Agnostic
- Is Built For Enterprise Teams
- Is Real Time
- Builds Data Governance and Privacy
- Delivers World-class Customer Success

World-class Customer Success Includes:

- Account Management
- Digital Strategy
- Solutions Engineering
- Integrated Solutions
